Highly Accurate Flow Meters - Insertion turbine and inline turbine flow meters are accurate to within $\pm 0.5\%$ of rate at the calibrated typical flow rate and within $\pm 2\%$ of rate over an extended 50:1 turndown range (0.4 - 20 ft/s).

Complete Installation Package - All mechanical installation hardware, color coded interconnecting cabling and installation instructions are provided to ensure error-free installation and accurate system performance.

DESCRIPTION

The System-10 BTU Meter provides highly accurate thermal energy measurement in chilled water, hot water and condenser water systems based on signal inputs from two matched temperature sensors (included) and any of ONICON's insertion or inline flow meters (ordered separately). The N2 model provides local indication of energy, flow and temperature data through an alphanumeric display, as well as data to Johnson Controls' systems via the N2 communications bus. An optional auxiliary input is also available to totalize pulses from another device and communicate the total directly to the network.

APPLICATIONS

Chilled water, hot water and condenser water systems for:

- Commercial office tenant billing
- Central plant monitoring
- University campus monitoring
- Institutional energy cost allocation
- Performance/efficiency evaluations
- Performance contracting energy monitoring
