The F-4600 series is a family of inline flow meters that provide accurate, reliable flow measurement for a variety of applications.

• Chilled Water • Hot Water • Steam Condensate • Domestic Water • Condenser Water & Water/Glycol Solutions • Process Application Water Flow •
FEATURES

Reliable No-Moving-Parts Design - Wetted transducers measure the ultrasonic signal transit time differential, which correlates directly to the flow rate. The direct beam path orientation significantly enhances signal strength and long term reliability.

Highly Accurate Over a Wide Flow Range - The flow sensor is accurate to within ±1% of reading over the normal (25:1 turndown) operating range and within ±2% of reading over an extended (100:1 turndown) range.

User Friendly Backlit Display and User Interface - The bright, easy-to-read, backlit display uses “smart button technology” to simplify page navigation and programming. This eliminates the need for special configuration tools.

Detachable Display - The F-4600 user interface display is easily detached from the flow sensor. This allows for remote mount installation up to 5ft from the sensor body.

Built-in Interval Data Logger - Volume totals are date/time stamped and logged within the meter along with other analytical data. This data is available via BACnet® or MODBUS®.

CALIBRATION

Each F-4600 is subjected to a comprehensive series of conformance tests which ensures that each meter is fully functional and meets the published performance and accuracy specifications. The absolute accuracy of conformance test equipment is directly traceable to NIST*. A certificate of conformance is provided.

APPROVALS
